

Data Structures LAB

Linked Lists

1. Implement a menu-driven program C / C++ to perform the following operations on a single linked list:

- | | |
|-----------------------------------|------------------------------------|
| (i) Insert at beginning | (ii) Insert at end |
| (iii) Insert at a random position | (iv) Delete from beginning |
| (v) Delete from end | (vi) Delete from a random position |
| (vii) Count the number of nodes | (viii) Traversing |

2. Implement a program C / C++ to reverse a single linked list.

3. Implement a program in C / C++ to implement a single linked list where each node stores the details of students [Scholar No., Name, Branch, and Semester].
